- 9. Species** : Jhaw, Raintree, Koroi, Arjun, Neem, Guava, Jackfruit, Mahagoni, Akashmoni, Babla, Krisnachura, Sunalo, Jharul, Khathbadam, Koromcha, Amloki, Raintree, Kodbel, Jham, Hortaki, Bohera, Mango, Babla, Natai etc.
- 10. No. of seedlings** : 80,000 (Eighty Thousand).
- 11. No. of Participants** : 435 Nos.
- 12. Site Selection Criteria** : The plantation site is selected through the meeting with UP Chairman, UP Members and other local Elites.
- 13. Species selection** : When the best possible information has been collected on the characteristics of the site to be planted, the next step is the selection of the tree species to plant. The aim is to choose species which are suited to the site, will remain healthy throughout the anticipated rotation, will produce acceptable growth and yield, and will meet the objectives of the plantation (fuel wood production, protection, etc.).
- 14. Time of planting** : The planting season (June) generally coincides with the rainy season; usually, planting is started as soon as a specified quantity of rain has fallen. This amount of precipitation must be judged on the basis of local knowledge. Planting can also be initiated when the soil is wet to a specified depth (approximately 20 centimeters).
- 15. Soil structure** : Sandy loam soil
- 16. Planting method** : The plantation site is a rural Embankment & canal site and it is connected to the main road. The Embankment & canal site is surrounded with arable/ agricultural, human settlements while scattered trees are seen/existed. On the month of June, both sides of the Embankment & canal bushes have been cleaned to make suitable for the plantation. On the same month, Arhar has also been given with a view to support the seedlings by making line at both sides of the road. On the following month, pits have been done with the size of 30cm × 30cm × 30cm keeping distance in between pits 2m. Moreover, mixed Cowdung and Chemical Fertilizer put into the pits according to the SUFAL Manual's land preparation for the plantation. For raising strip plantation, 100000 (One Lac) matured seedlings of several species such as Jhaw, Raintree, Koroi, Arjun, Neem, Guava, Jackfruit, Mahagoni, Akashmoni, Babla, Krisnachura, Sunalo, Jharul, Khathbadam, Koromcha, Amloki, Raintree, Kodbel, Jham, Hortaki, Bohera, Jamrul, Babla, Natai etc have been planted in the nourished/prepared pits. After that, 5 fit size sticks put in the soil which are tied by the rope with the seedlings. Since, there are the chances of grazing and other unavoidable harmful activities, a number of Watchers have been appointed to tackle the plantation site from damage and deterioration. Besides, selected beneficiaries and field level staff of the Forest Department are also looking after the plantation site. An Agreement between the Forest Department acting on behalf of The Government of the People's Republic of Bangladesh (1st Party) and Land Owning Agencies (2nd Party) and Group of Local Participants-Selected Beneficiaries (Third Party) is or will be done. Furthermore, a committee will also be formed within the plantation site from the selected beneficiaries to make sustainable of the ongoing 20 Seedling Km Strip Plantation.
