11. Plant to plant & line to line distance	:	1.5 x 1.5 meters
12. Garden Border		
a. New Jalear Char	:	a) In the north- Char Alauddin Range Area. b) In the south- Low Land. c) In the East- Low Land d) In the West- Char Alexander Range
b. New Jalear Char	:	a) In the north- Char Alauddin Range Area. b) In the south- Low Land. c) In the East- Low Land d) In the West- Char Alexander Range
c. New Khager Char	:	a) In the north- Char Bata Range b) In the south- Char Alauddin Range c) In the East- Low Land. d) In the West- High Land
13. Pre-condition for Garden creation	:	The newly awakened char was initially muddy. When the grass grows in it, it is suitable for planting.
14. Companion Crops	:	No other plant grows in the primitive state except the uri grass. With the planting of Keora seedlings, other species arrive.
15. Topography	:	First, a plain is formed in the mud. Tides inundate twice daily. Tides are strong from mid-March to October. Tides are slower in

winter. So char is permanent. During November to January, silt accumulates more and the amount of fodder increases. At this time, 50 to 90 cm of sediment accumulates.

16. Soil structure : Sandy loamy clay soil.
17. Weather & Rainfall : Rainfall is high from May to September
Annual rainfall is 2500 mm.
18. Seedling method : First fix a pillar is surveyed and boundaries are marked. Later, seedlings with roots are taken from the mangrove nursery and the seedlings are planted by straightening the lines with the help of long ropes at a distance of 1.5x1.5 meters. After a few days, the seedlings are re-planted in the places where the seedlings die. Saplings are planted from 01/12/23 to 31/12/23. As soon as the saplings are planted, the saplings are drowned in the tide water. During high tides, silt rolls over the planted saplings and the saplings are thrown under the silt soil. This is why the whole year. Dhariya mangrove plantations should be planted.
