

PLANTATION JOURNAL

Sustainable Forests & Livelihoods (SUFAL) Project

“Jhaw Plantation”

Range : Jahajmara Range, Hatiya.

Beat : Jahajmara Sadar Beat.

Plantation Area : 50.0 Hectare.

Financial Year : 2021-2022

Coastal Forest Division, Noakhali

Raising Jhaw of 50.0 Hectare. Plantation in Financial Year 2021-2022 under SUFAL Project.

A Basic Information			
1.	Name of the plantation with Year	Jhaw Plantation, FY : 2021-2022	
2.	Plantation Area	50.0 Hectare	
3.	Beat, Range & Divison	Jahajmara Sadar Beat, Jahajmara Range, Coastal Forest Division Noakhali	
4.	Species	<u>Casuarina equisetifolia</u> (Jhaw),	
5.	No. of seedlings	1,25,000 Nos.	
6.	Location	District: Noakhali	Union: Jahajmara
		Upazila: Hatiya	Char: Char Younus.
8.	Name & Designation of the Officers & stuffs Involved in the Plantation Raising Activitiest	1. Mr. Md. Farid Meah, DCF. 2. Mr. Kazi Tariqur Rahman, ACF. 3. Mr. S M Syfur Rahman, Forester, Range Officer. 4. Mr. Md. Shohag Ahmed, Forester, Beat Officer. 5. Mr. Md. Anisur Rahman, Forest Guard. 6. Mr. Md. Belel Uddin, Forest Guard. 7. Mr. Reaz Uddin, Boat Man. 8. Mr. Md. Ali Akabbar, Boat Man. 9. Mr. Md. Abu Saleh, Boat Man.	
B Characteristic of the Plantation Site			
1.	Area of the Plantation	50.0 ha Jhaw Plantation in the year of 2021-2022.	
2	Edaphic Condition	Physiographically the Char is part of the young Meghna Estuarine Flood Plain. Hobgoblin, the site is soft and clayey and it is also comparatively compact and harder as well as at the same time subjected to more saline condition. These soils permit easy penetration of mound and mangrove tree roots because of being quite fertile.	
3	Climate Condition	This char has a tropical monsoon climate, characterized by basically four seasons per year. The average temperature usually ranges between 11 ° to 29 ° C in winter and 21 ° to 38 ° C during summer. The average annual rainfall is 3257 mm (Islam 2009) and varies from	

		2500 mm to 4500 mm. Cyclones pass regularly, particularly at the beginning and at the end of the monsoon.
4	Selection Criteria of the Planting Site	The plantation site has been selected through the following criteria. - Land suitability: The land of the planting site (Jahajmara Sadar) is hard and Sandy Loam. In addition, the site is comparatively compact and harder as well as at the same time subject to more saline condition where Jhaw seedlings e.g. <u>Casuarina equisetifolia</u> (Jhaw) are suitable for plantation. - Grazing Problem: It is known to that there entire are a number of chars in Noakhali and accreting new lands. These chars are threat to the grazing problems. But this is free from such unavoidable phenomenon. That is why this site is selected for the mangrove plantation. - Biodiversity Conservation: The Coastal afforestation program will bring a result in the establishment of plantation rich in biodiversity and higher density of wildlife habitats. Natural regeneration of forest tree species with their associates will be enhanced. In addition, through the project area the condition of coastal forest in Bangladesh will extent. - Poverty Reduction: The project activities are comprised of civil works, nursery and plantation raising and maintenance, gardening etc.; which are labor intensive and technical works. Male and female can be deployed or engaged in all these works based on their working capability; which will create employment opportunities for them and help them in alleviating poverty and fulfilling needs. Thus they will be benefited socio-economically and their social esteem will be elevated. - Sectoral Target: The people residing in the project area are exposed to frequent cyclones and tidal surge which makes them highly vulnerable to recent climate change effects. As a result, their socio-economic condition is less secured. Beside this, the land mass developed due to accretion of the sediments discharged through Meghna estuary needs to be stabilized. On the other hand, the objectives of the forestry sector is to increase the total forest cover of the country and to optimize sustainable production of goods and services from the existing limited forest resources. The coastal area of the proposed project is such type of land where forestry resources could be developed through establishment of plantations. - National Strategy: The proposed project is also aligned with the National Strategy; the <i>Bangladesh Sixth Five Year Plan (FY2019-FY2023)</i>. According to the plan, existing scattered coastal areas will be planted to increase productivity by promoting scientific management principles. In order to prevent the extent of damage by cyclones and tidal surges, the plan envisages creating a Coastal Green Belt and enhancing access to input materials, including seeds and seedlings. In addition, past climate disasters have shown that resilience to cyclones and storm surges is greater where mangrove greenbelts and buffer ecosystems exist. It is evident that mangroves can mitigate or reduce risk of natural disasters such as cyclones and tsunamis. - Global Aspect: According to the IPCC report of 2013, approximately 95% human beings are the responsible for the climate change and Bangladesh is the home to the world's largest delta systems. Two third of the country is less than

		five meters above the sea level. It is vulnerable to short term climate shocks such as cyclone (DFID-2011). As a result, human beings and natural resources are threats to climate change. So, there is no alternative without afforestation and reforestation in the coastal zones. That is why “ Jahajmara Sadar is selected for Jhau plantation.
5	Climate Resilient Aspect of the Plantation	★ The Coastal forest, breakwater, seawall is to absorb the impact forces and to retard the flow of large storm waves and cyclone. A seawall, if tall enough, reflects the waves back out to sea. On the other hand, permeable structures, like breakwaters and coastal forests, partly reflect and partly transmit the water. In the case of a coastal forest, energy is progressively absorbed as it passes through the forest. Without the forest barrier, the tsunami/cyclone will run-up to a maximum height determined by the magnitude and nature of the seismic event that created the tsunami and local factors such as the coastal profile, offshore bathymetry and beach slope that modify the wave's force. Once the tsunami comes on shore, the amount of reduction in water depth, velocity, and force depends on how much water is reflected and energy is absorbed by the coastal forest. ★ Through the afforestation in the project area biodiversity conservation, human security and so on will be ensured in the project area. Therefore, greenbelt of the project area by rising said plantation has been planned to bring back the balance of ecosystem into the same char lands and to develop a friendly environment by raising coastal afforestation. It is for the fact that the land is suitable for mangrove and non-mangrove plantations where bio-physical and socio-economic conditions will improve. The Jahajmara Sadar will be brought to work as a barrier during natural disasters by dint of the mangrove plantation.
C	Planting Activities	
1	Delineation of the Planting Area	The Jahajmara Sadar is the ultimate result of sedimentation lead to form a marshy land whose soils permit easy penetration of Jhau tree roots and agricultural crop roots because of being quite fertile. The proposed project will be used for different types of plantations which are suitable in the coastal zone by leveling with the existing species diversity. If the coastal forest lands of a target area are properly replenished with greens, the existing wildlife habitats will increase and will be a nice environment for Biodiversity conservation. This type of coastal forest lands can fight back the prevailing environmental threats and mitigate the negative impacts of the climate changes took place in these coastal zones. Thus, this type of coastal forest lands not only save the life and resources from natural disasters but also play important role in economic development.
2	GPS Reading of all Corners of the Planting Site	The GPS has been experiment in reaching the every position of the plantation site particularly through the each corner of the site in presence of the RO, BO, FG, BM as well as all other FD-Noakhali under Hatiya Upazila.

3	Post-Planting Survey, Surveyor, Survey Technique & Record	Mr. Md. Shafiqul Islam Surveyor The Survey has been completed through the technique of GPS reading and it is 1 st recorded in the note book after that the record is shown in the Map
4	Post-Planting Map (Scale)	Post-Planting Map has been Attached in this Journal

1. Signature of the officers Involved in the Raising Mangrove Plantation activities :

Sl.	Name	Designation	Signature
01	Mr. Md. Shohag Ahmed, Forester	Beat Officer, Jahajmara Sadar Beat Jahajmara Range, Hatiya. Coastal Forest Division Noakhali.	 Md. Shohag Ahmed Forester Beat Officer, Jahajmara Sadar Beat Jahajmara Range, Hatiya. Coastal Forest Division, Noakhali.
02	Mr. S M Syfur Rahman, Forester	Range Officer Jahajmara Range, Hatiya Coastal Forest Division Noakhali.	 S M Syfur Rahman Range Officer Jahajmara Range, Hatiya Coastal Forest Division, Noakhali.
03	Mr. Kazi Tariqur Rahman, ACF	Assistant Conservator of Forest Coastal Forest Division Noakhali.	 Kazi Tariqur Rahman Assistant Conservator of Forest Coastal Forest Division Noakhali.
04	Mr. Md. Farid Meah, DCF.	Divisional Forest Officer Coastal Forest Division Noakhali.	 Md. Farid Meah Divisional Forest Officer Coastal Forest Division Noakhali.

Post Planting Map Of Jhaw Plantation Area
Beat : Jahajmara Sadar, Range : Jahajmara.
Coastal Forest Division Noakhali.

Year : 2021-2022 .

Area : 50.0 Hec.

EXPENDITURE SHEET

Jhaw Plantation'2021-22, Area : 50.0 Hectare.

Jahajmara Sadar Beat, Jahajmara Range, Coastal Forest Division, Noakhali.

Project : Sustainable Forests & Livelihoods (SUFAL) Project

Vr. No.	Month	Particulars	Amount		NBP
			Current	Progress	
06/Jama	June/2022	Daily labours were engaged from 01.06.2022 to 30.06.2022 in Jahajmara Sadhar beat of Jahajmara Range for survey the plantation site. map post planting survey and making of map. GPS readings at every turn along the boundary of the plantation site need to be noted on the plantation journal. The FD staff will do the survey while the labor will assist. stacking (2600 stacks to be collected or purchased for sound stacking at 2500 points including of seedlings with stack by shootly. pit (1' X 1' X 1') Making, Leave the pits open for about 2 weeks. 2500 pits are required per hectare. One MD should make 150 such pits. procure compost or decomposed cowdung 0.5 kg per pit. carry these to planting site. mix these manures properly with the soil in the pit. pulverize the soil, mix it with compost/ cowdung remove all debris. root pieces, plant the seedlings by taking off the bags carefully two moths. Application of fertilizers after @ of 10 gm per pit. Post planting weeding and Climber Cutting, post Planting Survey and making of map. FD staff will perform the survey with assistance of labor Fixing RCC Signboard With Writing and painting of Plantation Information (Signboard Size 8'-0" X 3' - 0" From Ground 2'-6" high at 3' - 0" X 3' - 0") for 5.0 ha 1. Raising of 50.0 hac. Jhaw Plantation in 2021-22 FY. under the Sustainable Forests and Livelihoods (SUFAL) Project. Daily labours 580 M/Days @ 500/-	2,90,000/-	2,90,000/-	22/527
07/Jama	June/2022	Do Daily labours 524 M/Days @ 500/-	2,62,000/-	5,52,000/-	22/527
08/Jama	June/2022	Do Daily labours 580 M/Days @ 500/-	2,90,000/-	8,42,000/-	23/527
09/Jama	June/2022	Do Daily labours 515 M/Days @ 500/-	2,58,000/-	11,00,000/-	23/527
		Total =	11,00,000/-		
		Payment to the Contractor for delivery of miscellaneous goods.....	6,54,750/-		
		Total =	17,54,750/-
